

KABIR CHHOKER

(623)-628-7358 | kabirchhoker@gmail.com | linkedin.com/in/kchhoker/ | github.com/kchhoker | Tempe, AZ

ACADEMICS

Bachelor of Science in Computer Science, Arizona State University, Tempe

Fall 2024 - Present

Relevant Coursework: Data Structures and Algorithms, Object Oriented Programming, Linear Algebra, Statistics.

EXPERIENCE

Library Aide III | LIB Bibliographic and Serials Maintenance | Tempe, AZ

Aug 2025 - Current

- Created a Python script to cross-check serial records against a CSV export, flagging duplicates and missing entries
- Maintained and updated catalog entries in the library's database system, ensuring consistent formatting and data accuracy
- Used Excel to build a simple tracker for incoming serials, reducing manual lookup time for the team
- Collaborated with librarians to update digital databases for improved resource management.

Content Writer and Editor (CRY) | Intern | India

May 2023 - Jan 2024

- Assisted in basic HTML formatting of articles uploaded to CRY's website using the CMS editor.
- Maintained a structured content database in Notion, tagging articles by topic, status, and publication date for easy retrieval.
- Developed and edited content for CRY's website, gaining traction on social media platforms.
- Used Google Sheets formulas to organize and analyze child welfare survey data across multiple districts

Digital Services Associate | Jio | Delhi, India

Aug 2022 - Jan 2023

- Diagnosed and resolved common technical issues including network configuration, APN settings, and app connectivity for 800+ customers.
- Guided customers through Jio's digital payment platforms, improving digital adoption among first-time users.
- Escalated unresolved technical issues to the backend support team via the internal ticketing system with detailed issue logs.

PROJECTS

Flashcard Quiz App

May 2026

- Designed and implemented a spaced repetition algorithm in Python, applying strong object-oriented design principles and data structure knowledge to optimize card prioritization.
- Used Python's pickle module to serialize and deserialize deck objects, implementing a lightweight data modeling and persistence layer.
- Applied analytical and problem-solving skills to debug session state issues and ensure consistent performance across varying input sizes.

Password Manager CLI

May 2026

- Built a credential retrieval system using dictionary-based lookups for O(1) average access time, reflecting strong knowledge of data structures and algorithms.
- Designed the vault schema using structured data modeling principles to support categorized, searchable, and extensible credential storage.
- Used Python's cryptography library (Fernet) to implement AES-128 symmetric encryption, demonstrating applied knowledge of information security and data protection.

REST API — Book Library

May 2026

- Used Flask's @app.route decorators to define RESTful endpoints (GET, POST, PUT, DELETE), applying client-server protocol and API design skills to build a clean, scalable back-end.
- Connected Flask to a MySQL database using mysql-connector-python with parameterized queries, applying data modeling and processing best practices to prevent SQL injection.

House Price Prediction - ML Model

May 2026

- Built a supervised machine learning model in Python using scikit-learn's Linear Regression to predict house prices based on structured input features.
- Developed a modular project architecture across dedicated files (preprocess.py, train.py, evaluate.py, dataloading.py) following clean separation of concerns.
- Evaluated model performance using four metrics — MSE, RMSE, MAE, and R² Score — to assess prediction accuracy and generalization on the test set.
- Generated an actual vs. predicted price scatter plot using Matplotlib to visually validate model performance and identify prediction .

PROGRAMMING SKILLS

Languages: Python, Java, C++, HTML, CSS.

Databases & OS: MySQL, Linux/Unix.

Frameworks & Libraries: Flask, PyTorch, Sklearn, Pandas, NumPy, Node.js, Git, REST APIs.
